Animal Sciences, Washington State University

ARCS Foundation Seattle Chapter

What We Do

ARCS Mission Statement

ARCS Foundation advances science and technology in the United States by providing financial awards to academically outstanding US citizens studying to complete degrees in science, engineering and medical research.

Chapter Vision Statement

The vision of ARCS Foundation Seattle Chapter is for Washington State to be a world leader in scientific excellence and innovation for the betterment of humanity. We are a thriving chapter of members who support research scholars at the University of Washington and Washington State University through well-funded fellowships.

Solidarity Statement

ARCS Foundation Seattle Chapter stands in solidarity with the BIPOC and LGBTQ communities. We are committed to diversity, equity, and inclusion. We commit to use our platform as a catalyst to create lasting change. You may read our full statement of support at www.seattle.arcsfoundation.org

“Since 1978, Seattle ARCS Foundation has consistently delivered on our mission to advance science in America. Our approach is straight forward and effective: we provide unrestricted financial support to outstanding STEM graduate students at WSU and the UW. This investment has paid off, past, present, and future. Please join us in championing the next generation of scientific talent.”

Jenny Wyatt

Board member names in bold

“ARCS Foundation Seattle Chapter has enabled us to provide critical funding to some of our most talented students pursuing degrees in science, engineering, and medical research. Their support has not only helped these students achieve their academic goals but has also empowered them to pursue groundbreaking research that will have a significant impact on society at large.”

Kirk Schulz

President, Washington State University

“The health and prosperity of communities here and around the world depend on innovation and discovery by scholars and scientists. For the past 45 years, ARCS Foundation has partnered with the University of Washington to recruit and train generations of researchers who are creating and accelerating impact for the benefit of people everywhere.”

Ana Mari Cauce

President, University of Washington

45 Years of Igniting Scientific Innovation

Seattle Chapter President, Mrs. David E. Skinner, receives the ARCS Charter from Mrs. James LeSage, President, ARCS Foundation, Inc. Left to right: Mrs. John B. Clayburgh, Mrs. LeSage, Mrs. Skinner, Mrs. David E. Wyman, and Mrs. Alva Lane Herd.

On October 10, 1978, a contingent of ARCS Foundation, Inc. members flew to Seattle for the formal presentation of the ARCS Charter to the new **SEATTLE** Chapter. Mmes. James Le Sage, Alva Lane Herd, John Richardson of the National Executive Board, William Bergin, past president of N.E.B., John Kilroy, Los Angeles Chapter director, and John Clayburgh, director of Los Angeles Chapter and a founding director of the Seattle chapter were guests for luncheon and the meeting at the home of Mrs. Robert Hutchinson . . . Mrs. Clayburgh was co-hostess.

“My ARCS Fellowship came at just the right moment to boost my confidence, strengthen my tenacity and get me through the hard and lonely work of invention. For this I have much gratitude.”

Joshua Woodward

Associate Professor, Microbiology
University of Washington

“Our department is consistently ranked among the top 10 in the world,” notes Joshua Woodward, associate professor at the UW microbiology department. “You’ve got Harvard, Stanford, MIT...as one of the top public institutions we don’t have the financial resources that private institutions can offer when they’re recruiting students.”

The Seattle area’s high cost of living is well documented, and often a bit of a shock for potential students. Financial support—“a huge part of our recruitment,” says Joshua—is just one of the ways ARCS can help the department be more competitive with private schools.

“The networking support is really valuable as well,” he continues. “Not just across the campus, but across the entire ARCS organization.” And then there are the students themselves. Joshua firmly believes in the power of existing students as a recruitment tool. “Top students bring in other top students,” he says. With the added incentive of ARCS Fellowships, the department can attract even more of the best scholars.

Once they’re here, they not only benefit the important work of the department, many also go on to benefit Seattle’s biotech industry, an important driver of the local economy. “A lot of our students are new to the Pacific Northwest,” Joshua comments. “They often fall in love with the city and decide to stay, which builds the biotech network in the city.”

UW Departments

ARCS Seattle Chapter supports Scholars in the following departments and schools

College of Arts & Sciences

- Applied Mathematics
- Astronomy
- Biology
- Chemistry
- Mathematics
- Physics
- Speech & Hearing Sciences
- Statistics

College of Engineering

- Aeronautics & Astronautics
- Bioengineering (Jointly with School of Medicine)

Graduate School (Interdisciplinary)

- Molecular & Cellular Biology
- Neuroscience

School of Dentistry

- Department of Oral Health Sciences (includes DDS/ PhD and PhD degree programs)

School of Medicine

- Bioengineering (Jointly with School of Medicine)
- Genome Sciences
- Medical Scientist Training Program (MD/PhD)
- Microbiology

University of Washington

Turtle May

*ARCS Scholar 2021 - 2024
Environmental & Forest Sciences
University of Washington*

“Indigenous communities feel the impacts of environmental issues disproportionately,” says second-year ARCS Fellow Turtle May. She’s working with the Confederated Tribes of the Colville Reservation on an environmental issue that’s become all-too-familiar in the western United States: wildfires.

“They’ve been experiencing a lot more wildfires over the past six years,” she notes. “And they’re a sovereign nation, with less government oversight and fewer restrictions, so they can do more to address environmental issues with natural resources.” Turtle, who is Cherokee, is evaluating what’s working and what’s not in the efforts to minimize the impacts of wildfires when they occur.

And her research has the potential to influence forest management far beyond the northeast reaches of Washington state. She’ll soon be presenting her work to the Intertribal Timber Council, attended by tribal members from across the country.

Turtle is grateful to be continuing her studies at the UW, among the country’s top 10 schools for environmental sciences and forestry. But, she says, “I wasn’t prepared for the extremely high cost of living in Seattle.” She credits ARCS as playing a role in her decision to enroll. “I had some options I was considering but ARCS was the icing on the cake,” she comments. “The additional support, the interest in me and what I wanted to do...those were the deciding factors.”

School of Nursing Nursing Sciences

School of Pharmacy Health Economics and Outcomes Research Medicinal Chemistry Pharmaceutics

School of Public Health

Biostatistics
Environmental & Occupational
Health Sciences
Epidemiology
Institute for Public Health
Genetics
Pathobiology

“To address the challenges within our communities and across the globe, we need to nurture new ideas and inspire creative solutions. By giving to graduate education, ARCS Foundation Seattle Chapter is investing in the next generation of scientists, researchers and scholars, who will tackle complex problems to build a healthier and more equitable world.”

Joy Williamson-Lott
Dean of the UW Graduate School

Kelly Brayton

*Chair, Veterinary Microbiology and Pathology
Washington State University*

“It comes down to money,” says Kelly Brayton, chair of WSU’s department of Veterinary Microbiology and Pathology. She’s speaking of recently graduated Doctors of Veterinary Medicine (DVMs), who typically conclude those studies with a substantial amount of debt. “We’re seeking students to pursue PhDs after their DVMs—to do research,” she continues, “but the difference between what they can make in the job market and graduate stipends is just too great.”

That’s where ARCS makes a difference. “Being able to offer ARCS Fellowships is really useful in our recruitment efforts,” Kelly notes.

The department, which has a focus on infectious disease and has an international reputation for its vector-borne disease studies, is also looking to grow and expand diversity across its programs. “We’re looking to increase opportunities to get the best students, and we see ARCS as a key part of that,” Kelly comments.

Those students are vital to continuing the important work of the department—which includes studies of tick-borne diseases, such as Lyme disease, and others that affect both humans and livestock. One of the studied livestock pathogens results in losses of over \$300 million per year in the US alone. A breakthrough would have huge impacts globally. And with the added tool of ARCS Fellowships, the department can continue to attract the top scholars who can help make such a breakthrough happen.

Washington State University

Allison Herrick

ARCS Scholar 2020 - 2023

Animal Sciences, Washington State University

Dairy is in Allison Herrick's blood. Growing up on a dairy farm owned by her aunt and uncle in upstate New York, she watched her father work as a herdsman and wanted to learn more. She joined 4-H at age 8, won a calf at age 10 and started her own herd shortly thereafter. Through those experiences, she says, "I fell in love with the dairy industry."

After completing her undergrad in animal and dairy science at Cornell University in 2020, Allison began considering schools for her postgraduate work. "I wasn't really looking at anything beyond the East Coast," she notes.

ARCS was a key factor in her decision to continue her studies at WSU. She toured and knew it felt great—but the cross-country move gave her pause. Then she learned of the ARCS program. "It was the last, final step," she says. "I knew WSU was the right fit."

Now a third-year Fellow, Allison is studying cattle genetics, specifically disease and genomic selection, which can help predict the future performance of an individual animal based on DNA. Her work could make a big difference for dairy farmers—like her aunt and uncle—who work with tight financial margins. Ultimately, she hopes to work with producers on breeding programs, helping to ensure that investments are cost-effective and offer increased return.

"WSU deeply appreciates the ARCS Foundation's tireless commitment to supporting the advancement of science through graduate education. Doctoral students are critical to the success of our research mission. Our students' research helps fulfill our land-grant mission, and ARCS enriches the student experience through its mentoring and networking opportunities."

Elizabeth Chilton

Chancellor & Provost of WSU Pullman

ARCS Endowed Fellowship Donors

ARCS Foundation Seattle Chapter is grateful to the following donors who have established ARCS Endowed Fellowships with contributions ranging from \$75,000 to more than \$150,000. ARCS Endowed Fellowships support ARCS Scholars in perpetuity at the University of Washington and Washington State University. The (#) indicates the number of scholars supported over time.

Dorothy L. Simpson ARCS Foundation Seattle Chapter Leadership Award

Established in 2018 in honor of Dorothy Lewis Simpson (1924-2018), this award recognizes an ARCS Scholar with exceptional qualities of leadership, intellectual curiosity, and dedication to the greater good.

Brenden Fraser-Hevlin

ARCS Scholar 2019 - 2022
Chemical & Bioengineering
Washington State University

We are proud to name Brenden Fraser-Hevlin as the 2023 Dorothy L. Simpson Leadership Award recipient. Brenden earned his BS degree in Bioengineering from Oregon State University. He is now a PhD candidate at the WSU Voiland School of Chemical Engineering & Bioengineering with an emphasis on cancer immunotherapy. His research includes design of a new centrifugal bioreactor (CBR) to culture cells for cancer treatments. Brenden is a major contributor on a patent for unique technologies incorporated within the CBR prototype design. As part of university-wide training, he is implementing new models that allow for simulation and prevention of cyberattacks on sensors connected to the CBR.

Brenden is committed to achieving scientific discoveries that will ultimately transform the field of cancer care. He also inspires undergraduate students to continue their future careers as engineers and scientists. Throughout his studies, Brenden has mentored several undergraduate students who are members of groups underrepresented in STEM fields. Congratulations Brenden!
